Title

NZ Elevation Survey Index

Date

Date

Abstract

The NZ Elevation Survey Index dataset provides an index to all LiDAR derived elevation datasets found on the LINZ Data Service. Each record in the dataset provides both a geometry of the extent of the elevation survey, as well as useful metadata attributes. The extents are derived from the maximum extent of DEM and DSM coverage and consist of full NZTopo50 1k tiles, even where a tile is only partially covered with data. These extents only provide a rough indication of corresponding point cloud coverage which can be quite different for some elevation surveys. Please refer to the [NZ Aerial Surveys Data Dictionary](<https://nz-imagery-surveys.readthedocs.io/en/latest/introduction.html>) for detailed metadata and information about this dataset. The elevation data referenced by this dataset is available on the [LINZ Data Service](<https://data.linz.govt.nz/data/category/elevation/>).

Purpose

Elevation data available on the LINZ Data Service is made up of many different regions with separate elevation index tiles including limited metadata. The NZ Elevation Survey Index dataset provides much more information about the elevation surveys in one location.

Statement

The NZ Elevation Survey Index dataset is an aggregation of all the elevation index tiles layers on the LDS. The inner boundaries of each index tiles layer have been dissolved. For some of the older elevation datasets, the tiles have been adjusted to match actual DEM and DSM coverage.
