NZ Survey Boundary Vectors

**Date****Abstract**

This layer provides the latest bearing (direction) and/or distance for cadastral boundaries. When a cadastral survey is undertaken the relationship between boundary and non-boundary marks is ascertained or measured. • This commonly is in the form of a vector (bearing and distance), but occasionally just one component. • Some relationships are defined as arcs. In this data layer, the arc length is recorded in the distance field and a separate record holds the chord. Only observations that have been captured in Landonline are available. This includes vectors that were re-captured in the Survey Capture Areas from survey plans lodged prior to Landonline and all survey observations since.

**Purpose**

This layer provides the latest bearing (direction) and/or distance for cadastral boundaries.
