NZ Kermadec Is Spring Points (Topo, 1:25k)

Date**Abstract**

The place where water issues from the ground naturally Data Dictionary for spring_pnt: https://docs.topo.linz.govt.nz/data-dictionary/tdd-class-spring_pnt.html Although captured and presented at 1:25,000 this layer, for all intents and purposes, forms part of the Topo50 map series. Further information on Topo50: <http://www.linz.govt.nz/topography/topo-maps/topo50>

Purpose

Permits may be required to visit some sensitive and special islands. Contact the Department of Conservation to see if you need to apply for a permit. When using Topo50 data, please be aware of the following: 1. The existence of a road or track does not necessarily indicate public right of access. 2. The Department of Conservation should be contacted for the latest information on tracks and huts. 3. Not all aerial wires, cableways and obstructions that could be hazardous to aircraft are held in the data. 4. Contours and spot elevations in forest and snow areas may be less accurate.

Lineage
LI_ Lineage
Statement
LINZ and our predecessors have been responsible for national topographic mapping in New Zealand for more than a hundred years. The first digital data for the NZ Offshore Islands at 1:25,000 and 1:50,000 was created in the late 80's and early 90's by scanning the maps that

existed at the time (the NZMS 272 series) The raw data was created by photogrammetrists who from 1974 to 1997 mapped the islands from overlapping pairs of aerial photographs. Cartographers then took the data and added symbols and text, and created the colour separations needed to produce the printed maps. In 2009 and 2010 LINZ used satellite imagery and data supplied from the Department of Conservation to update the offshore islands data. Printed maps (in hardcopy and digital form) in are also available.
