AIMS: Address Position

Date**Date****Date****Abstract**

****Please read:**** The AIMS: Address Position table is part of the [set of comprehensive AIMS Address tables](<https://data.linz.govt.nz/set/87>). The Address Position table contains the point location of an address. An address can have multiple point positions. The Addresspositiontype describes the position E.g. centroid, set back from road. In the first instance the Landonline address position will be used the positioning of this is 'unknown'. Additional Address Position data may be captured over time. The comprehensive address dataset includes eight data tables and nine lookup tables. The dataset has been sourced from LINZ's Address Information Management System (AIMS), a centralised database for the management of national addresses, including for electoral purposes. This set of normalised tables replaces the single Landonline: Street Address layer currently published on LDS. This layer contains information advised to LINZ by Territorial Authorities (TAs). [Under the Local Government Act 1974 (section 319)] (<http://www.legislation.govt.nz/act/public/1974/0066/latest/DLM420385.html>) it is the responsibility of the TAs to advise LINZ (the Surveyor General) of all allocated addresses in their district. For a simplified version of the data contained within these tables see [NZ Street Address] (<https://data.linz.govt.nz/layer/3353>). Please refer to the [Street Address Data Dictionary] (<https://data.linz.govt.nz/document/1627>) for detailed metadata and information about this layer.

Purpose

This data table is part of a set of related data tables and associated look-up tables and provides more complex address information designed for advanced applications.
