Abstract

****Please read:**** This dataset provides linear geometries against which official road names and street addresses can be recorded. Its purpose is also to enable automated meshblock address reports (for electoral and statistical purposes) so as to identify the presence of a road name in meshblocks where street addresses do not exist. For this dataset (as opposed to the [NZ Roads Subsections (Addressing)](<https://data.linz.govt.nz/layer/53383>) dataset, individual road section geometries have been aggregated to a single road centreline geometry where those subsections share the same name, and are generally contiguous. Because some roads have multiple names for part of their lengths, some road centreline geometries will duplicate parts of other roads even though there is in reality only one road formation. This dataset has been simplified from LINZ's NZ Roads dataset, a centralised database for the management of national road data. The comprehensive [set of NZ Roads tables](<https://data.linz.govt.nz/set/4788>) is also available. These road centrelines do not represent actual road formation, nor do they represent legal access. They must not be considered as topographic, cadastral, or legal. This dataset contains the core attributes of a road to support simple searching or provide a road name context for cadastral data views. Please refer to the [NZ Roads Data Dictionary](<https://data.linz.govt.nz/document/12628>) for detailed metadata and information about this dataset. --- ****APIs and web services**** This dataset is available via ArcGIS Online and ArcGIS REST services, as well as our standard APIs. [LDS APIs and OGC web services](<https://data.linz.govt.nz/layer/53382/webservices/>) [ArcGIS Online map services](<https://linz.maps.arcgis.com/home/item.html?id=f27aae8bb35542f8ad93042973911062>)

Purpose

This layer contains the core attributes of a road to support simple searching or provide a road name context for cadastral data views.
