ASP: Name Associations (Deprecated)

Date**Abstract**

In June 2014, LINZ moved the information from the Authoritative Streets and Places database (ASP) into Landonline and the ASP database is no longer maintained. ** *** This table identifies other names for a street or place record by linking to the SUFI of the other name. This allows multiple associations if applicable. Only one record is stored for each name/other_name combination, i.e. there is no reverse entry for any two SUFI's. This table is part of the Authoritative Streets and Places (ASP) Database. For more information about the database including the data model see [here] (<http://www.linz.govt.nz/property-addressing/address-road-places-data>). **Notes:** - The Alias field was added during the conversion and all records were initially set to N (No). This field will be set if relevant when editing existing records or adding new records. The values for other records will be set when time permits.

Purpose

This table identifies other names for a street or place record by linking to the SUFI of the other name. This allows multiple associations if applicable. Only one record is stored for each name/other_name combination, i.e. there is no reverse entry for any two SUFI's.

Statement

The ASP database was designed to support the electoral system, its primary purpose to provide an authoritative listing of Streets and Places in New Zealand, and to be able to report these by Local Authority, General or Maori Electorate, or No-Licence District. Under the Electoral Act, LINZ must hold an authoritative record of all road names in New Zealand; and the Local Government Act charges local authorities with the responsibility of assigning road names and street address.
