### Abstract

**\*\*In June 2014, LINZ moved the information from the Authoritative Streets and Places database (ASP) into Landonline and the ASP database is no longer maintained. \*\***

**\*\*\*\*\*** This table contains names that refers to a geographic area, and that can be used in lieu of, or to localise or refine, a street address. A place record will exist for every name that is considered to fit this definition, including any alias or alternative names that also fit this definition. This table is part of the Authoritative Streets and Places (ASP) Database. For more information about the database including the data model see [here] (<http://www.linz.govt.nz/property-addressing/address-road-places-data>). **\*\*Notes:\*\*** - Some reports generated from ASP require the PLACE\_NAME+ LOCALITY+STATUS combination to be unique, so validation rules have been put in place to enforce this. - The locality names currently used in the PLACES table are not ideal, and are considered a work in progress. The main function of LOCALITY in ASP is to achieve uniqueness, and where 2 places of the same name exist, to be able to differentiate between them.

### Purpose

This table contains names that refers to a geographic area, and that can be used in lieu of, or to localise or refine, a street address. A place record will exist for every name that is considered to fit this definition, including any alias or alternative names that also fit this definition.

##### Statement

The ASP database was designed to support the electoral system, its primary purpose to provide an authoritative listing of Streets and Places in New Zealand, and to be able to report these by Local Authority, General or Maori Electorate, or No-Licence District. Under the Electoral Act, LINZ must hold an authoritative record of all road names in New Zealand; and the Local Government Act charges local authorities with the responsibility of assigning road names and street address.
