Landonline: Observation Accuracy

Date

Abstract

****Please read:**** This table is part of the comprehensive Full Landonline Dataset and is designed for use only by data professionals who require the complex version of our property ownership and boundary data for advanced uses. ***** Observation Accuracy data is required as an input to a Network Adjustment and also to allow the quality of Observations to be judged. Observation Accuracy applies to a particular Observation (variance or standard deviation) or pair of Observation (covariances or correlations). The latter case is particularly relevant to the case of GPS baselines resulting from a multi-station adjustment. Please refer to the [LDS Full Landonline Data Dictionary and Models](<https://data.linz.govt.nz/document/95>) for detailed metadata about this table.

Purpose

The Full Landonline Dataset is specifically intended to cater for those users who have a requirement to access large volumes of data on a regular basis. The extract allows the recipient to recreate the database held in Landonline. It does not enhance the data in any way, other than to make it available in a standard formats. Entire table views are exported. Consequently, the extracted data covers the entire country, rather than individual areas or pre-defined geographic extents.
