Landonline: Mark Name

Date

Abstract

****Please read:**** This table is part of the comprehensive Full Landonline Dataset and is designed for use only by data professionals who require the complex version of our property ownership and boundary data for advanced uses. For a simplified version of data contained within this table see our [property ownership and boundary data](<https://data.linz.govt.nz/data/category/property-ownership-boundaries/>). ***** This table contains the current name, geographic name and any alternative names associated with a mark. The geographic name of a mark refers to the official feature name in the Geographic Names database which may differ from the name of a mark which is emplaced on or near that feature. A mark may have several alternative names but only one current and geographical name should exist. When a mark is placed as part of a cadastral survey dataset (plan) its identity is in terms of the dataset series and ID number allocated and an abbreviated description of either the mark type or purpose. Marks can also be numbered in sequence in accordance with the mark type e.g. IS I DP 3456; IS II DP3456. Please refer to the [LDS Full Landonline Data Dictionary and Models] (<https://data.linz.govt.nz/document/95>) for detailed metadata about this table.

Purpose

The Full Landonline Dataset is specifically intended to cater for those users who have a requirement to access large volumes of data on a regular basis. The extract allows the recipient to recreate the database held in Landonline. It does not enhance the data in any way, other than to make it available in a standard formats. Entire table views are exported. Consequently, the extracted data covers the entire country, rather than individual areas or pre-defined geographic extents.
